

McConaghy 50' composite performance yacht.

General Specs

Make	McConaghy
Model	Custom 50 ft
Construction	Composite, Carbon Structure

This 50ft McConaghy composite performance yacht is designed for speed, ease of use and single handed sailing – with full hydraulic control of the boat from the helm, yet with complete redundancy manual control should anything fail. No expense has been spared in creating a lightweight performance boat with a demanding aesthetic finish. Seriously reduced in price, the owner has just been delivered a new 'landmark' yacht also built by McConaghy's which makes Satori excess to the owner's requirements. In-boom furling, self-tacking genoa, hydraulically driven sail controls. It really is a boat that you can sail on your own but can luxuriously accommodate company in order to show it off!

Composite E glass/closed cell foam and carbon structure make this a super light cruising boat at under 11 tons. Carbon mast and boom with beautiful North 3DL sails make it a speed machine. A gennaker in a sock will give you great downwind speed and very easy to set on your own or with a crew member. A lifting keel - 2 m up and 3 m down - is very useful for shallow quiet anchorages. This boat is fully equipped for comfortable/long distance cruising and it has always been immaculately maintained without expense spared. You will benefit from an exceptionally built performance yacht at an exceptional price.
